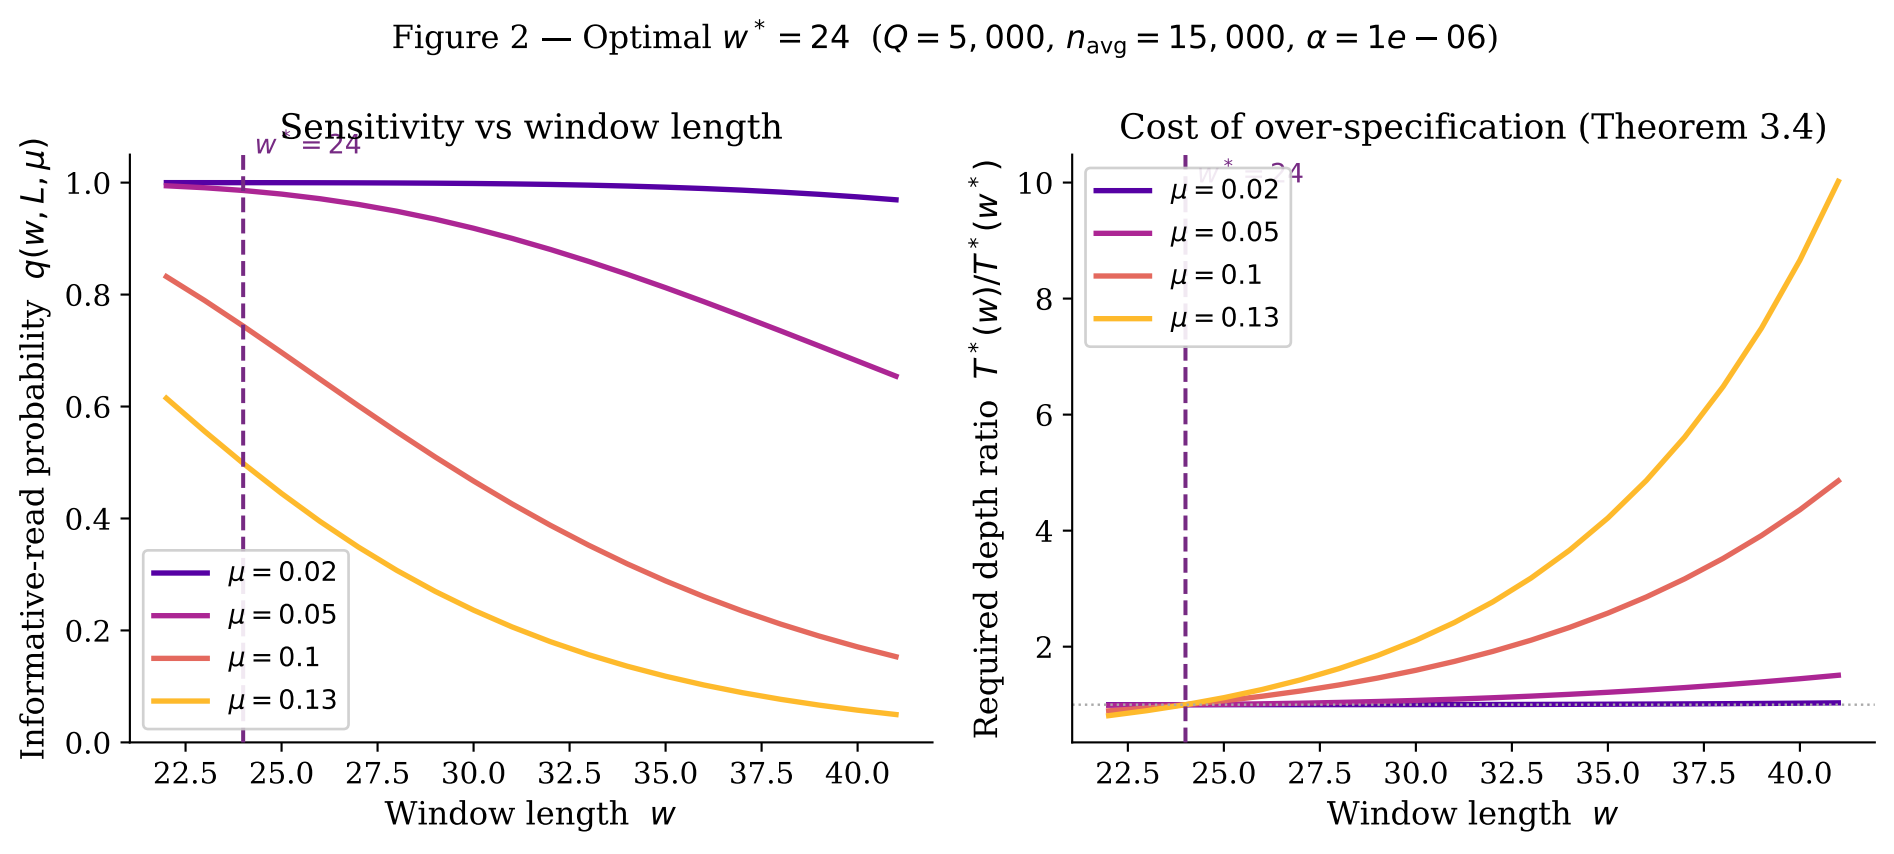

Figure 2 — Optimal $w^* = 24$ $(Q = 5,000,\ n_{\text{avg}} = 15,000,\ \alpha = 1e-06)$
Sensitivity vs window length
$w^* = 24$
Informative-read probability $q(w, L, \mu)$
Window length w
$\mu = 0.02$
$\mu = 0.05$
$\mu = 0.1$
$\mu = 0.13$
Cost of over-specification (Theorem 3.4)
Required depth ratio $T^*(w)/T^*(w^*)$
Window length w
